

linPRO[®] organic

*The natural way to
enrich your products
with **Omega-3s**.*

With O&T Farms new Certified Organic linPRO™ and linPRO™-R animal feed ingredients, we're helping our customers serve this growing, highly lucrative market.

We're already a proven leader in the Omega-3 animal feed market segment. Our new Certified Organic line of products provides the same nutritional benefits of Omega-3s to serve this growing market segment.

Our LinPRO™ brand offers high-energy, flaxseed-based feeds with high levels of Omega-3 fatty acids and amino acids. The Omega-3 fatty acids contained in flaxseed have been associated with many animal and human health benefits. Omega-3 fatty acids have been shown to provide immunological benefits and potential production benefits to livestock, as well as human benefits that include improving brain and eye health and lowering the risk of heart disease, depression, dementia and arthritis.

Feeding linPRO™ to livestock is **the natural way to improve the nutritional value of proteins** (i.e. milk, eggs and meats).

"The organic certification of linPRO™ means our flaxseed-based products can offer animal health and production benefits to a wider range of livestock producers. They open the door for the production of Omega-3 enriched organic alternatives for consumer food products such as milk, eggs, beef and chicken."

—Elan Ange, CEO of O&T Farms.
