

DESVAC DOVAC

Automatic Injector for Day Old Chick Vaccination

The **Desvac Dovac** automatic injector is Ceva's most successful equipment with thousands of units produced since 2005. It is designed for the vaccination of day old chicks subcutaneously in the neck or intra-muscularly in the leg.

Key Features

- Precise injection site
- Adjustable to any bird's size for best performance
- Accurate dosage for cost saving
- Specifically designed for the latest Ceva Vectors and Immuno-complex vaccine technology
- Unique technology for twin injection (oily and water based vaccines) with single needle
- User friendly , ergonomic design
- Resistant long lasting material

Pathologies: Marek, Gumboro, Newcastle Disease, Fowl Pox, Avian Influenza
Ceva Vaccines: Cevac Transmune, Vectormune, Cevac Broiler ND K....

PROFILE

Ergonomic and Easy to Use Design

- Pneumatic equipment working at 4 bars
- Low maintenance
- Total & batch counters

Precise Injection

- Guaranteed full dose every time
- Very accurate injection point
- Smooth and sensitive triggering system

Reliable Syringe

- Adjustable dosage from 0.1ml to 0.4 ml
- Mechanical dosage locking system
- Specifically designed for the latest Ceva Vectors and Immuno-complex vaccine technology

Adjustable Injection Site Area

- Adaptable to bird morphology
- 3 different needle adjustments
- Improves the quality of vaccination with less animal injuries

SPECIFICATIONS

Target	Day old chicks
Vaccination Technique	Subcutaneous and intramuscular
Weight	8 kg
Air Consumption	23.86 L.min-1
Working Pressure	4 bars
Dose	0.1 ml to 0.4 ml
Speed	2500 - 3000 DOC.h-1

As part of the Ceva Hatchery Immunisation Control Keys program (C.H.I.C.K.), our Ceva Hatchery Specialist will monitor the good operation of the equipment and the quality of vaccination during the routine visit.
